

Mathletics Launch Lesson

What is the Mathletics Launch Lesson?

This is an opportunity to see, first hand, our resources in action being used by the children in a lesson.

Your local Mathletics expert takes the 45-60 minute lesson and ensures that the resource is introduced in an easily to assimilate way, in small bite sized chunks. Each child gets to access their individual account and begin their Mathletics journey.

The lesson is the most practical hands on demonstration possible – what tougher test is there than launching it in a class or assembly of children who haven't ever used it before?

What we cover

- Introduction to the 'Hall of fame'/Leader boards
- Explanation of the points and rewards systems
- Avatar - explain how to customise the avatar through our motivational reward system
- The live game/placement test
- Curriculum Activities/Lessons
- Teacher centre – setting tasks and assessments, diagnostic reporting, lessons plans, differentiation.

Why do 3P, schools and children love launch lessons?

- The best way to see how a resource works – don't take our word for it, we let you and your pupils see what you think!
- Great fun and sure to get the children excited about maths!
- Afterwards you'll feel empowered to be able to use the resource and make the most of your free two week trial.
- Takes the stress away from you of needing to worry about explaining or introducing the resource correctly.
- We do this every day so we'll make sure all the key elements are covered and the children and teachers know exactly how to get the best out of the resource to improve their learning and teaching.

"This is a truly comprehensive primary maths resource, aligned to the new national curriculum, reassuring users of its on-going excellence. 3P Learning offers high quality teacher resources coupled with a detailed approach to differentiated learning, making this an excellent product and a must for all Primary Schools."
